A cross-sectional view of a cylindrical device. The device has a central core 88, an inner layer 90, and an outer layer 92. A notch 94 is formed in the outer layer 92. A layer 96 is shown at the bottom edge.

A cross-sectional view of a cylindrical device, likely a catheter or probe. The device has a central lumen (90) and a multi-layered wall. The innermost layer is a thin lining (92). The middle layer is a thicker, hatched material (94). The outermost layer is a thin, multi-layered sheath (96). The device is shown with a rounded, multi-layered tip (88).
